DISCLAIMER

The Faculty of Science and Engineering has made all reasonable efforts to ensure that the information contained within this publication is accurate and up-to-date when published but can accept no responsibility for any errors or omissions.

The Faculty of Science and Engineering reserves the right to revise, alter or discontinue degree programmes or modules and to amend regulations and procedures at any time, but every effort will be made to notify interested parties.

It should be noted that not every module listed in this handbook may be available every year, and changes may be made to the details of the modules. You are advised to contact the Faculty of Science and Engineering directly if you require further information.

The 23-24 academic year begins on 25 September 2023

Full term dates can be found [here](#)

DATES OF 23-24 TERMS

25 September 2023 – 15 December 2023

8 January 2024 – 22 March 2024

15 April 2024 – 07 June 2024

SEMESTER 1

25 September 2023 – 29 January 2024

SEMESTER 2

29 January 2024 – 07 June 2024

SUMMER

10 June 2024 – 20 September 2024

IMPORTANT

Swansea University and the Faculty of Science of Engineering takes any form of **academic misconduct** very seriously. In order to maintain academic integrity and ensure that the quality of an Award from Swansea University is not diminished, it is important to ensure that all students are judged on their ability. No student should have an unfair advantage over another as a result of academic misconduct - whether this is in the form of **Plagiarism, Collusion** or **Commissioning**.

It is important that you are aware of the **guidelines** governing Academic Misconduct within the University/Faculty of Science and Engineering and the possible implications. The Faculty of Science and Engineering will not take intent into consideration and in relation to an allegation of academic misconduct - there can be no defence that the offence was committed unintentionally or accidentally.

Please ensure that you read the University webpages covering the topic – procedural guidance [here](#) and further information [here](#). You should also read the Faculty Part One handbook fully, in particular the pages that concern Academic Misconduct/Academic Integrity.

Welcome to the Faculty of Science and Engineering!

Whether you are a new or a returning student, we could not be happier to be on this journey with you.

At Swansea University and in the Faculty of Science and Engineering, we believe in working in partnership with students. We work hard to break down barriers and value the contribution of everyone.

Our goal is an inclusive community where everyone is respected, and everyone's contributions are valued. Always feel free to talk to academic, technical and administrative staff, administrators - I'm sure you will find many friendly helping hands ready to assist you. And make the most of living and working alongside your fellow students.

During your time with us, please learn, create, collaborate, and most of all – enjoy yourself!

Professor David Smith
Pro-Vice-Chancellor and Executive Dean
Faculty of Science and Engineering

Faculty of Science and Engineering	
Pro-Vice-Chancellor and Executive Dean	Professor David Smith
Director of Faculty Operations	Mrs Ruth Bunting
Associate Dean – Student Learning and Experience (SLE)	Professor Laura Roberts
School of Mathematics and Computer Science	
Head of School	Professor Elaine Crooks
School Education Lead	Dr Neal Harman
Head of Mathematics	Professor Vitaly Moroz
Mathematics Programme Director	Dr Kristian Evans

STUDENT SUPPORT

The Faculty of Science and Engineering has two **Reception** areas - Engineering Central (Bay Campus) and Wallace 223c (Singleton Park Campus).

Standard Reception opening hours are Monday-Friday 8.30am-4pm.

The **Student Support Team** provides dedicated and professional support to all students in the Faculty of Science and Engineering. Should you require assistance, have any questions, be unsure what to do or are experiencing difficulties with your studies or in your personal life, our team can offer direct help and advice, plus signpost you to further sources of support within the University. There are lots of ways to get information and contact the team:

Email: studentsupport-scienceengineering@swansea.ac.uk (Monday–Friday, 9am–5pm)

Call: +44 (0) 1792 295514 (Monday-Friday, 10am–12pm, 2–4pm).

Zoom: By appointment. Students can email, and if appropriate we will share a link to our Zoom calendar for students to select a date/time to meet.

The current student **webpages** also contain useful information and links to other resources:

<https://myuni.swansea.ac.uk/fse/>

READING LISTS

Reading lists for each module are available on the course Canvas page and are also accessible via <http://ifindreading.swan.ac.uk/>. We've removed reading lists from the 23-24 handbooks to ensure that you have access to the most up-to-date versions.

We do not expect you to purchase textbooks, unless it is a specified key text for the course.

THE DIFFERENCE BETWEEN COMPULSORY AND CORE MODULES

Compulsory modules must be **pursued** by a student.

Core modules must not only be **pursued**, but also **passed** before a student can proceed to the next level of study or qualify for an award. Failures in core modules must be redeemed.

Further information can be found under “Modular Terminology” on the following link -

<https://myuni.swansea.ac.uk/academic-life/academic-regulations/taught-guidance/essential->

MA-101 Introduction to Analysis 1

Credits: 15 Session: 2023/24 September-January

Pre-requisite Modules:

Co-requisite Modules: MA-111

Lecturer(s): Prof ECM Crooks

Format: 33 hours: This will be a mixture of sessions which may include for example lectures, quizzes, exercises.

11 hours: In Person Interactive Small Group Sessions. This will be an examples class. If it is not possible to deliver these sessions in person then they will take place as Live Online Teaching.

Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.

Module Aims: The module introduces basic concepts such as sets, functions, completeness, sequences and series.

Module Content: • sets, basic properties and set operations

- examples of sets of numbers: natural numbers, integers, rational numbers, real numbers
- arithmetic and ordering properties of real numbers
- the absolute value, inequalities, intervals
- mathematical induction
- functions (domain, co-domain, range), examples including polynomials, rational functions
- injective, surjective, bijective functions, composition of functions, inverse functions
- upper and lower bounds of subsets of real numbers, infimum and supremum
- completeness of the real numbers, Archimedean property
- sequences of real numbers, limits of sequences
- algebra and ordering of limits of sequences
- monotone sequences, recursively-defined sequences
- Cauchy sequences, subsequences, Bolzano-Weierstrass
- series, convergence of series, examples of convergent and divergent series
- absolute convergence of series
- comparison, ratio, root, alternating and integral tests for series convergence

Intended Learning Outcomes: At the end of this module students should be able to:

- 1) explain basic set theory
- 2) give a formally correct proof
- 3) use the concept of mathematical induction
- 4) determine properties of functions such as injectivity, surjectivity, bijectivity
- 5) discuss the completeness of the real numbers
- 6) identify well-known sequences and series
- 7) apply various techniques to determine whether or not sequences and series converge

Assessment: Examination (80%)
Assignment 1 (20%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Examination: A closed book examination to take place at the end of the module.

Assignment 1: formed of a number of coursework assignments along with participation in the module during the semester. The assignments will develop student's skills in problem solving, and developing and writing logical arguments.

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary examination.

Additional Notes: Delivery of teaching will be on-campus. Continuous assessment will be submitted online.

Available to visiting and exchange students

MA-102 Introduction to Analysis 2

Credits: 15 Session: 2023/24 January-June

Pre-requisite Modules:

Co-requisite Modules: MA-101; MA-111

Lecturer(s): Prof ECM Crooks

Format: 44 hours: This will be a mixture of sessions which may include for example lectures, quizzes, exercises.

11 hours: In Person Interactive Small Group Sessions. This will be an examples class. If it is not possible to deliver these sessions in person then they will take place as Live Online Teaching.

Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.

Module Aims: The module introduces fundamental concepts such as limits, continuity, differentiability and integrability.

Module Content:

- open and closed subsets of real numbers
- limits for real-valued functions, properties of limits
- continuous functions, examples and properties of continuous functions
- Intermediate Value Theorem
- continuous functions on closed bounded intervals
- uniform continuity
- derivatives, basic properties of derivatives
- Rolle's Theorem, Mean Value Theorem
- local extreme values of functions
- L'Hopital's rules
- exponential, trigonometric and hyperbolic functions
- partition of an interval, lower and upper Riemann sums
- Riemann integral
- inequalities and Mean Value Theorem for integrals
- fundamental theorem of calculus
- improper integrals

Intended Learning Outcomes: At the end of this module students should be able to:

- 1) use the definition of limit to prove results about the limits of real-valued functions
- 2) outline properties of continuous and differentiable functions
- 3) use properties of the derivative to investigate the behaviour of functions
- 4) sketch the graphs of the exponential, trigonometric and hyperbolic functions
- 5) determine whether or not functions are Riemann integrable

Assessment:

- Examination (80%)
- Coursework 1 (5%)
- Coursework 2 (5%)
- Coursework 3 (5%)
- Assignment 1 (5%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Exam: A closed book examination to take place at the end of the module.

Courseworks 1-3: This coursework will develop students' skills in problem solving, and developing and writing logical arguments.

Assignment 1 is an Employability Assessment: A number of employability quizzes with the same deadline.

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary examination.

Additional Notes: Delivery of teaching will be on-campus. Continuous assessment will be submitted online.

Available to visiting and exchange students

MA-111 Foundations of Algebra	
Credits: 15 Session: 2023/24 September-January	
Pre-requisite Modules:	
Co-requisite Modules: MA-101	
Lecturer(s): Dr EJ Beggs	
Format: 44	
Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.	
Module Aims: An introduction to logic and algebraic structures. The course covers the basics of logic, proof and algebraic manipulation before introducing the abstract algebra of groups, rings and fields.	
Module Content: Logic: statements, connectives, truth tables, quantifiers, what does it mean 'to prove'. Binary operations on sets: commutative, associative operations, manipulations with brackets. Introduction to groups and group homomorphisms, symmetric group, integers modulo n . Introduction to rings and ring homomorphisms, integers, rationals. Introduction to fields, rationals and reals. Polynomials, polynomial division, roots, irreducibility. Complex numbers, roots, algebraically closed fields. Matrices, 2 by 2 determinants.	
Intended Learning Outcomes: At the end of this module, the student should be able to: <ul style="list-style-type: none"> 1) explain and apply the basic principles of logic, proof and algebraic manipulation, 2) define groups, rings and fields and describe their basic properties, 3) solve basic algebraic problems in concrete and abstract situations, 4) apply appropriate techniques of algebraic manipulation to a given situation, 5) recognise patterns underlying a variety of algebraic situations, 6) work with and explain the need for complex numbers, 7) state the fundamental theorem of algebra. 	
Assessment:	Examination (80%) Assignment 1 (20%)
Resit Assessment:	Examination (Resit instrument) (100%)
Assessment Description: Examination: A closed book examination to take place at the end of the module. Assignment 1: formed of a number of coursework assignments along with participation in the module during the semester. The assignments will develop student's skills in problem solving, and developing and writing logical arguments.	
Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit	
Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work. For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.	
Failure Redemption: Supplementary examination.	
Additional Notes: Delivery of teaching will be on-campus. Continuous assessment will be submitted online.	
Available to visiting and exchange students	

MA-112 Introductory Linear Algebra	
Credits: 15 Session: 2023/24 January-June	
Pre-requisite Modules:	
Co-requisite Modules: MA-101; MA-111	
Lecturer(s): Prof G Garkusha	
Format: 44	
Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.	
Module Aims: An introduction to combinatorics, vectors, matrices and abstract vector spaces.	
Module Content: Divisibility, Euclid algorithm for numbers and polynomials. Relations and orders. Combinatorics and the binomial theorem. Countability, Russell's paradox. Matrices and linear equations, Gauss elimination. Determinants, PLU decomposition. Introduction to vector spaces and linear transformations, subspaces, bases, matrix representation of linear transformations.	
Intended Learning Outcomes: At the end of this module, the student should be able to: <ol style="list-style-type: none"> 1) explain set orderings and the concept of countability, 2) apply basic combinatorial techniques, 3) calculate the greatest common divisor and otherwise manipulate the Euclidean algorithm, 4) define the concept of a vector space and subspace and give standard examples of vector spaces, 5) explain the relationships between vectors, matrices, vector spaces and linear transformations, 6) solve systems of linear equations using Gaussian elimination, 7) define the concepts of bases and coordinates in vector spaces and subspaces, 	
Assessment:	Examination (80%) Coursework 1 (5%) Coursework 2 (5%) Coursework 3 (5%) Assignment 1 (5%)
Resit Assessment:	Examination (Resit instrument) (100%)
Assessment Description: Exam: A closed book examination to take place at the end of the module. Courseworks 1-3: This coursework will develop students' skills in problem solving, and developing and writing logical arguments. Assignment 1 is an Employability Assessment: A number of employability quizzes with the same deadline.	
Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit	
Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work. For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.	
Failure Redemption: Supplementary examination.	
Additional Notes: Delivery of teaching will be on-campus. Continuous assessment will be submitted online.	
Available to visiting and exchange students	

MA-131 Geometry: Mathematics, Logic and Communication	
Credits: 15 Session: 2023/24 September-January	
Pre-requisite Modules:	
Co-requisite Modules: MA-101; MA-111	
Lecturer(s): Dr S Lyakhova	
Format: 44	
Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.	
Module Aims: An introduction to Euclidean geometry and the axiomatic method, as a basis for developing general mathematical skills including logic and communication.	
Module Content: - The elements of mathematics: axioms, definitions, propositions, proofs, - Euclid's axiomatic approach to geometry, - Theorems of congruence, Thales, Pythagoras, Playfair's axiom, - Use of LaTeX to typeset mathematics, including diagrams - Other axiomatic geometries: hyperbolic, spherical, incidence. - Peano's axioms for arithmetic - Writing mathematics, - Giving and using feedback, - Presenting mathematics orally,	
Intended Learning Outcomes: At the end of this module students should be able to: 1) solve simple problems in Euclidean geometry, 2) construct basic logical proofs using the axiom systems of Euclid, Peano and hyperbolic geometry, 3) understand and apply classical geometrical theorems such as those of Pythagoras, Thales, 4) typeset mathematics using LaTeX, including diagrams where appropriate, 5) give oral presentations on their work, 6) demonstrate an understanding of the differences between well-written mathematics and poorly-written mathematics.	
Assessment:	Examination (60%) Coursework 1 (10%) Project (20%) Presentation (10%)
Assessment Description: 1) Coursework 1: formed of a number of coursework assignments along with participation in classes during the semester. 2) Project: This component consists of a short written report on a specified topic in geometry, including a commentary on how feedback has been used 3) Presentation: Each student will give a 5-6 minute presentation to their tutorial group on the topic of their project 4) Exam: A 2-hour written closed-book exam in January	
Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit	
Assessment Feedback: Lecturer feedback will be provided on the coursework homework assignments and presentation. Students will receive peer feedback on their project draft, and more feedback on the final submission. Generic cohort feedback will be provided on the examination performance, with individualized feedback available on request	
Failure Redemption: Redemption of failed components	
Additional Notes: Delivery of both teaching and assessment will be blended including live and self-directed activities online and on-campus.	
Available to visiting and exchange students	

MA-181 Introduction to Modelling and Simulation

Credits: 15 Session: 2023/24 September-January

Pre-requisite Modules:

Co-requisite Modules:

Lecturer(s): Dr N Picco

Format: 44 hours of lectures, examples classes and PC labs

Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.

Lectures supported by examples classes and PC labs

Module Aims: The module provides a basic introduction to mathematical modelling of the real world and use of computer programming to analyse and simulate such models. It will include basic modelling techniques, basic calculation methods, and computational approaches to solve simple models.

Module Content: 1) Introduction to mathematical modelling
2) Introduction to programming
3) Numerical methods and implementation
4) Discrete-time population growth
5) Analytical and computational techniques for Difference Equations
6) Continuous-time population growth using Ordinary Differential Equations (ODEs)

Intended Learning Outcomes: At the end of this module, students should be able to

- 1) Interpret mathematical models describing population growth dynamics.
- 2) Interpret and write basic algorithms.
- 3) Perform basic computations in Matlab.
- 4) Make appropriate changes to a basic model to describe dynamics of a different nature.
- 5) Interpret how variations in the model equations reflect in the resulting dynamics.
- 6) Select appropriate analytical and numerical methods to study a model.

Assessment: Examination (70%)
Assignment 1 (20%)
Assignment 2 (10%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Examination: is a written, closed-book examination at the end of the module.
Assignment 1: is formed of a number of coursework assignments during the semester along with participation in the module during the semester. The assignments will develop skills in problem solving, mathematical modelling of the real world and the use of computers to simulate real world problems.
Assignment 2: is a computing test to be taken in controlled conditions at the end of the module to assess skills in the use of computers to investigate models of real world problems.

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the coursework assignments and computing test, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary examination.

Additional Notes: Delivery of teaching will be on-campus. Continuous assessment will be submitted online.

Available to visiting and exchange students.

MA-192 Probability and Statistics

Credits: 15 Session: 2023/24 January-June

Pre-requisite Modules:

Co-requisite Modules:

Lecturer(s): Prof C Yuan

Format: 44 hours: Primarily lectures, additional support classes and lab classes

Delivery Method: All programmes will employ a blended approach to delivery using the Canvas digital learning platform.

Lectures on campus

Module Aims: The module is an introductory course on applied statistics. It will cover a variety of statistical tests, criteria for choosing appropriate tests, and the use of statistical software in dealing with large data sets.

Module Content: This module will treat the following topics:

Basic probability;
Confidence intervals;
Hypothesis testing;
Regression;
Parametric techniques;
Statistical computing.

Intended Learning Outcomes: At the end of the module the student should be able to:

- 1) Use basic results in probability;
- 2) Construct confidence intervals;
- 3) Test hypotheses including the use of t-tests and ANOVA;
- 4) Choose correct statistical tests;
- 5) Use parametric techniques to treat data sets;
- 6) Use regression techniques;
- 6) Use statistical software to deal with large data sets.

Assessment:

Examination (70%)
Coursework 1 (6%)
Coursework 2 (7%)
Coursework 3 (7%)
Laboratory 1 (10%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Examination: A closed book examination to take place at the end of the module.

Courseworks 1-3: This coursework will develop skills in problem solving, applying techniques to real world problems and understanding the use of computers to investigate problems.

Lab Assessment: Computing based controlled assessment to assess skills in the use of computers to investigate and analyse real world problems.

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the coursework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary exam

Additional Notes: Delivery of teaching will be on-campus. Continuous assessment will be submitted online.

Available to visiting and exchange students

MAW101 Cyflwyniad i Ddadansoddi 1

Credits: 15 Session: 2023/24 September-January

Pre-requisite Modules:

Co-requisite Modules: MAW102; MAW111; MAW112

Lecturer(s): Prof ECM Crooks

Format:

Delivery Method: On campus

Module Aims: The module introduces basic concepts such as sets, functions, completeness, sequences and series.

Module Content: • sets, basic properties and set operations

- examples of sets of numbers: natural numbers, integers, rational numbers, real numbers
- arithmetic and ordering properties of real numbers
- the absolute value, inequalities, intervals
- mathematical induction
- functions (domain, co-domain, range), examples including polynomials, rational functions
- injective, surjective, bijective functions, composition of functions, inverse functions
- upper and lower bounds of subsets of real numbers, infimum and supremum
- completeness of the real numbers, Archimedean property
- sequences of real numbers, limits of sequences
- algebra and ordering of limits of sequences
- monotone sequences, recursively-defined sequences
- Cauchy sequences, subsequences, Bolzano-Weierstrass
- series, convergence of series, examples of convergent and divergent series
- absolute convergence of series
- comparison, ratio, root, alternating and integral tests for series convergence

Intended Learning Outcomes: At the end of this module, students should be able to

- 1) explain basic set theory
- 2) give a formally correct proof
- 3) use the concept of mathematical induction
- 4) determine properties of functions such as injectivity, surjectivity, bijectivity
- 5) discuss the completeness of the real numbers
- 6) identify well-known sequences and series
- 7) apply various techniques to determine whether or not sequences and series converge

Assessment: Examination (80%)
Assignment 1 (20%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Component 1 is a written, closed-book examination at the end of the module. Component 2 is formed of a number of coursework assignments along with participation in classes during the semester.

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary examination.

Additional Notes: Delivery of both teaching and assessment will be blended including live and self-directed activities online and on-campus.

MAW102 Cyflwyniad i Ddadansoddi 2

Credits: 15 Session: 2023/24 January-June

Pre-requisite Modules:

Co-requisite Modules: MAW101; MAW111; MAW112

Lecturer(s): Prof ECM Crooks

Format: 33

Delivery Method: On campus

Module Aims: The module introduces fundamental concepts such as limits, continuity, differentiability and integrability.

Module Content:

- open and closed subsets of real numbers
- limits for real-valued functions, properties of limits
- continuous functions, examples and properties of continuous functions
- Intermediate Value Theorem
- continuous functions on closed bounded intervals
- uniform continuity
- derivatives, basic properties of derivatives
- Rolle's Theorem, Mean Value Theorem
- local extreme values of functions
- L'Hopital's rules
- exponential, trigonometric and hyperbolic functions
- partition of an interval, lower and upper Riemann sums
- Riemann integral
- inequalities and Mean Value Theorem for integrals
- fundamental theorem of calculus
- improper integrals

Intended Learning Outcomes: At the end of this module, students should be able to

- 1) use the definition of limit to prove results about the limits of real-valued functions
- 2) outline properties of continuous and differentiable functions
- 3) use properties of the derivative to investigate the behaviour of functions
- 4) sketch the graphs of the exponential, trigonometric and hyperbolic functions
- 5) determine whether or not functions are Riemann integrable

Assessment:

- Examination (80%)
- Coursework 1 (5%)
- Coursework 2 (5%)
- Coursework 3 (5%)
- Assignment 1 (5%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Exam: A closed book examination to take place at the end of the module.

Courseworks 1-3: This coursework will develop students' skills in problem solving, and developing and writing logical arguments.

Assignment 1 is an Employability Assessment: A number of employability quizzes with the same deadline

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary examination.

Additional Notes: Delivery of both teaching and assessment will be blended including live and self-directed activities online and on-campus.

Available to visiting and exchange students

MAW111 Sylfeini Algebra	
Credits: 15 Session: 2023/24 September-January	
Pre-requisite Modules:	
Co-requisite Modules: MAW101; MAW102; MAW112	
Lecturer(s): Dr EJ Beggs	
Format: 33	
Delivery Method: Ar y campws	
Module Aims: Cyflwyniad i strwythurau rhesymegol ac algebraidd. Mae'r cwrs hwn yn ystyried sylfeini rhesymeg, prawf a thrin algebraidd cyn cyflwyno yr algebra haniaethol o grwpiau, cylchoedd a meysydd.	
Module Content: Rhesymeg: datganiadau, cysylltion, gwirlenni, meintiolyddion, beth mae 'profi' yn ei olygu. Gweithrediadau deuaidd ar setiau: cymudol, gweithrediadau cysylltiadol, trin cromfachau. Grwpiau: grwpiau adnabyddus fel $(\mathbb{Z}, +)$, (\mathbb{R}^*, \cdot) , \mathbb{Z}_n , S_3 , cymesureddau sgwar ac ati. Cylchoedd: gan gynnwys polynomialau, \mathbb{Z} , \mathbb{Z}_n , cylch o fatricsau. Meysydd: gan gynnwys \mathbb{R} , \mathbb{Q} . Triniaeth algebraidd a thrin fformularau ar gyfer meysydd. Gwreiddiau polynomialau. Cyfuniadeg elfennol a'r theorem binomaidd. Cylchoedd eto: rhanadwyedd ac algorithm Euclid gydag enghreifftiau yn \mathbb{Z} a'r cylch o bolynomialau (gan gynnwys rhannu polynomialau), rhifau cysefin, y prawf bod \mathbb{Z}_p yn faes.	
Intended Learning Outcomes: Ar ddiwedd y modiwl hwn dylai'r myfyrwyr fod a'r gallu i:	
<ol style="list-style-type: none"> 1) egluro a defnyddio egwyddorion sylfaenol rhesymeg, prawf a thriniaeth algebraidd; 2) ddiffinio grwpiau, cylchau a meysydd a'u priodweddau sylfaenol; 3) ddatrys problemau algebraidd sylfaenol mewn sefyllfaoedd diriaethol ac haniaethol; 4) ddefnyddio dulliau priodol o driniaeth algebraidd; 5) adnabod patrymau mewn amrywiaeth o sefyllfaoedd algebraidd. 	
Assessment:	Examination (80%) Assignment 1 (20%)
Resit Assessment:	Examination (Resit instrument) (100%)
Assessment Description: Component 1 is a written, closed-book examination at the end of the module. Component 2 is formed of a number of coursework assignments along with participation in classes during the semester.	
Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit	
Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work. For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.	
Failure Redemption: Supplementary examination.	
Additional Notes: Delivery of both teaching and assessment will be blended including live and self-directed activities online and on-campus.	
Ar gael i fyfyrwyr ar ymweliad	

MAW112 Cyflwyniad i Algebra Llinol

Credits: 15 Session: 2023/24 January-June

Pre-requisite Modules:

Co-requisite Modules: MAW101; MAW102; MAW111

Lecturer(s): Prof G Garkusha

Format: 33

Delivery Method: Ar y Campws

Module Aims: Cyflwyniad i rifau cymhlyg, fectorau, matricesau a gofodau fector haniaethol.

Module Content: Perthnasau, trefnau a rhifadwyedd: enghreifftiau o setiau trefnedig fel R , Q , Z ; paradocs Russell.

Rhifau cymhlyg: C fel maes, diagram Argand, theorem De Moivre, gwreiddiau o rifau cymhlyg; rhifau cymhlyg fel set anhrefnedig; theorem sylfaenol algebra.

Matricsau: $M_n(R)$ fel cylch anghymudol.

Hafaliadau llinol, proses Gauss.

Fectorau a gofodau fector: adolygu byr o fectorau, diffiniad ffurfiol gofod fector fel haniaeth o briodweddau o fectorau planar neu geometrig, enghreifftiau R^n , polynomialau, ffwythiannau, M_n , $m(R)$, C^n , ac amrywiolion dros feysydd gwahanol.

Sylfeini a chyfersynnau.

Is-ofodau.

Mapiadau llinol, matricesau fel mapiadau llinol.

Determinannau: arwynebedd, cyfaint.

Intended Learning Outcomes: Ar ddiwedd y modiwl hwn dylai'r myfyrwyr fod a'r gallu i:

- 1) egluro trefniadau set a'r cysyniad o rifadwyedd;
- 2) weithio gyda ac egluro pam mae angen rhifau cymhlyg;
- 3) ddatgan y theorem sylfaenol algebra;
- 4) ddiffinio'r cysyniad o ofod fector ac is-wagle a rhoi enghreifftiau safonol o ofodau fector;
- 5) egluro'r berthynas rhwng fectorau, matricesau a thrawsffurfiadau llinol;
- 6) ddatrys systemau o hafaliadau llinol gan ddefnyddio'r broses Gaussian;
- 7) ddiffinio cysyniadau sylfeini a chyfersynnau mewn gofodau fector ac is-ofodau.

Assessment:

- Examination (80%)
- Coursework 1 (5%)
- Coursework 2 (5%)
- Coursework 3 (5%)
- Assignment 1 (5%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: Exam: A closed book examination to take place at the end of the module.

Courseworks 1-3: This coursework will develop students' skills in problem solving, and developing and writing logical arguments.

Assignment 1 is an Employability Assessment: A number of employability quizzes with the same deadline

Moderation approach to main assessment: Moderation of the entire cohort as Check or Audit

Assessment Feedback: For the homework assignments, students will receive feedback in the form of marks, model solutions, overall feedback on the cohort performance, and some individual comments on their work.

For the exam, students will receive feedback in the form of marks and overall feedback on the cohort performance. Further, individualised feedback, can be provided upon request.

Failure Redemption: Supplementary examination.

Additional Notes: Delivery of both teaching and assessment will be blended including live and self-directed activities online and on-campus.

Ar gael i fyfyrwyr ar ymweliad

MN-1502 Foundations of Finance

Credits: 15 Session: 2023/24 January-June

Pre-requisite Modules: None

Co-requisite Modules: None

Lecturer(s): Dr RO Sagay

Format: 10 x 2 hour lectures
10 x 1 hour weekly seminars (seminars to be scheduled in the PC lab where systems have access to FactSet though Zenworks)

Delivery Method: Delivery of this module will be through a series of lectures followed by seminars in small groups. All teaching is based on campus. Guest speakers may be invited to contribute as appropriate.

Module Aims: This module provides students with an understanding of structure and functions of financial systems, and introduces them to quantitative techniques used in investment and financial decision making at a basic level in preparation for further development of these subjects later in the degree.

Module Content: Topics:

Introduction to Financial Systems

Classification and role of financial markets

Classification and role of financial institutions

Nature and characteristics of financial securities

Features of debt and equity as sources of funds

Regulation of the financial sector

Time value of money

The investment decision - payback method

The investment decision - net present value, internal rate of return

Each lecture has an accompanying seminar on the same topic, except for:

Week 5 – coursework preparation seminar

Week 10 - revision session and worked mock-exam.

Intended Learning Outcomes: On completion of this module students should be able to:

Analyse the fundamental composition and functions of the financial system.

Explain the roles played by different types of financial institutions and financial markets in the economy.

Compare and contrast equity and debt, and analyses the nature and characteristics of various financial securities.

Assess the advantages and disadvantages associated with the regulation of the financial sector, considering its impact on market stability and investor protection.

Apply the concept of time value of money in financial decision-making, incorporating principles of present value, future value, and discounting.

Utilise various methods of investment appraisal to assess and select value-enhancing projects.

Assessment: Unseen Examination (Online) (70%)

Coursework 1 (30%)

Resit Assessment: Examination (Resit instrument) (100%)

Assessment Description: 30% Analysis report (1500 words)

70% online unseen examination (2 hours)

Moderation approach to main assessment: Moderation by sampling of the cohort

Assessment Feedback: Examination: Generic feedback via Canvas plus drop-in session for students who would like individual feedback on their performance.

Coursework: Written feedback via Canvas plus drop-in session for students who would like individual feedback on their performance.

Failure Redemption: To redeem failure in this module students will be expected to re-sit the online unseen examination component and this will be weighted at 100% of the overall module mark.

Additional Notes: This module is available to incoming exchange/visiting students, if there are any linked pre-requisites students will need to provide a copy of their transcript to assess suitability. Please email employability-management@swansea.ac.uk for more information.
